

# User Guideline

Measure your gennaker  
for Deckchute sailing

Depending on the length of your Deckchute and the size of your gennaker. Your gennaker must be fitted with two or three patches.

To order a Deckchute you must measure your gennakers luff (**G**) Foot (**H**) (and Leech (**I**)). To measure the gennakers luff, you stretch the sail between the foot and the head and so on. Do not try to follow the edges of the sail, which are curved. Based on your measurements we will make a blueprint of your gennaker telling where in the gennaker the two or three patches must be mounted.

Your sailmaker will use the blueprint to mount the patches.

## The Measurements we need:

**G** Head to Tack: \_\_\_\_\_

**H** Head to Clew: \_\_\_\_\_

**I** Tack to Clew: \_\_\_\_\_
