Measure your spinnaker

Depending on the length of your Deckchute and the size of your spinnaker, it is fitted with one, two or three patches.

To order a Deckchute you measure Luff, Foot and Leech

To measure the sails luff, you stretch the sail between head and tack. Do not follow the luff it self, which is curved.

Based on your measurements, we make you a blueprint of your spinnaker, telling where in the sail the patches must be mounted. Your sailmaker will use the blueprint to mount the patches.

In symmetric sails the two sides (luff/leech) are same length.
